

LISTING OF CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1 (previously presented): A panel mountable electronic device, said device comprising:

a housing including a flange through which passes a hole;

a tab having a threaded hole; and

a screw;

wherein said screw may be passed through said hole in said flange and engaged in said threaded hole such that a rotation of said screw rotates said tab into position to clamp a portion of said panel between said tab and said flange, and

wherein further rotation of said screw forcibly clamps a portion of said panel between said tab and said flange.

Claim 2 (original): The electronic device of Claim 1, wherein said housing is formed from a metal.

Claim 3 (original): The electronic device of Claim 1, wherein said housing is formed from a plastic.

Claim 4 (original): The electronic device of Claim 1, wherein said housing includes a heat sink.

Claim 5 (original): The electronic device of Claim 1, wherein said housing includes a recess into which said tab fits.

Claim 6 (original): The electronic device of Claim 5, wherein said tab may be rotated into said recess by rotation of said screw.

Claim 7 (original): The electronic device of Claim 1, wherein a portion of said housing limits rotation of said tab to a range of about 90 degrees.

Claim 8 (original): The electronic device of Claim 1, wherein said threaded hole is located off center in said tab.

Claim 9 (original): The electronic device of Claim 1, wherein said electronic device is an optical transceiver and further comprises at least one optical fiber connector.

Claim 10 (original): The electronic device of Claim 1, further comprising a notch in said housing located to slidably engage an edge of a board.

Claim 11 (previously presented): A method of mounting an electronic device to a panel, said electronic device including a housing having a flange, said method comprising:

inserting a screw through a hole in said flange and into a threaded hole in a tab;

inserting a portion of said housing through an opening in said panel;

rotating said screw to rotate said tab into position to clamp a portion of said panel between said tab and said flange; and

continuing rotation of said screw to forcibly clamp said portion of said panel between said tab and said flange.

Claim 12 (original): The method of Claim 11, further comprising rotating said screw to draw said tab toward said flange.

Claim 13 (original): The method of Claim 11, further comprising inserting said tab into a recess in said housing.

Claim 14 (original): The method of Claim 11, further comprising rotating said screw to rotate a portion of said tab out of a recess in said housing.

Claim 15 (original): The method of Claim 11, further comprising rotating said screw to rotate said tab into a position allowing insertion of said housing into said opening.

Claim 16 (original): The method of Claim 11, further comprising rotating said screw to rotate said tab in a range of about 90 degrees.

Claim 17 (original): The method of Claim 11, wherein said electronic device is an optical transceiver comprising at least one optical fiber connector attached to said housing.

Claim 18 (original): The method of Claim 11, further comprising slidably engaging a notch in said housing with an edge of a board.
